

3. Ancient Tech Free Energy

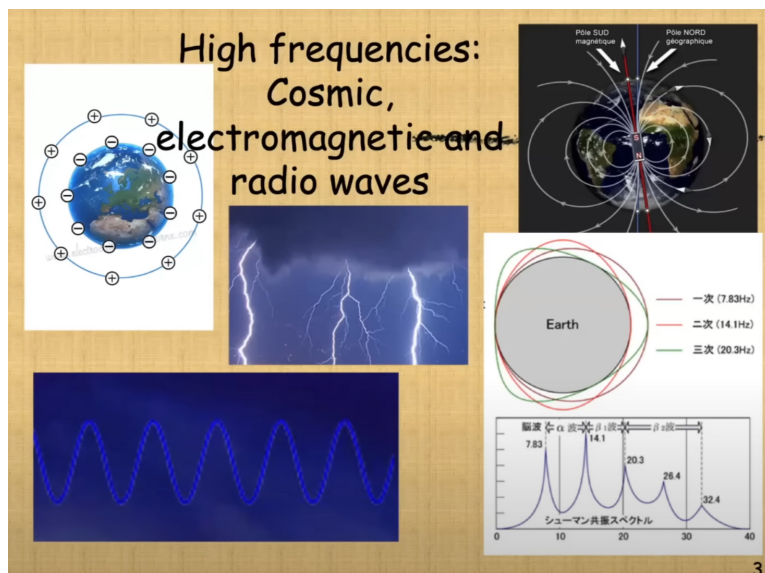

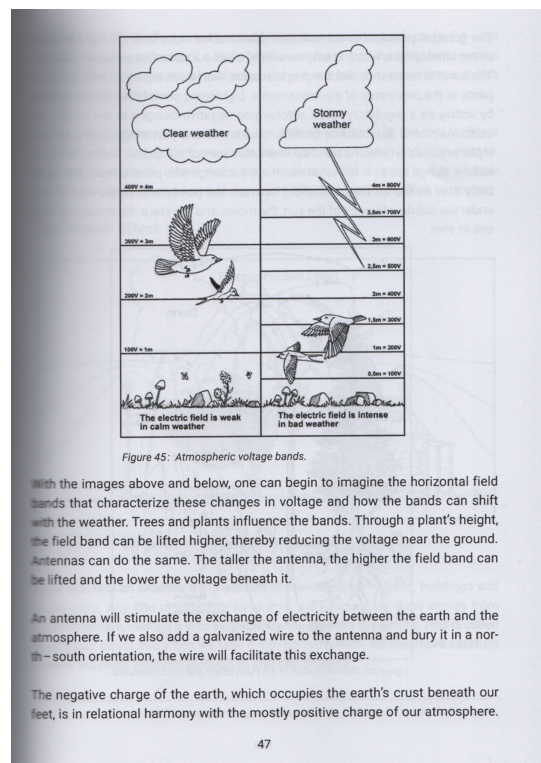

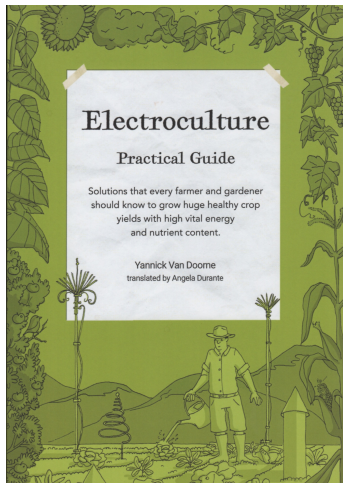

The earth is bathed in energy from the sun, the universe, and energy created from motion in the universe. The earth is a spinning magnet. A spinning magnet generates electricity. The sun provides direct energy including visible light. The universe is filled with etheric energy. All consciences in living beings or in plasma states generate energy.

Ancient pyramids are found all over the earth. Research is rediscovering the many positive benefits the energies concentrated by pyramids have on humans, plants, and animals. Pyramids are also electric energy generators.

Below are the areas of ancient tech free energy I am focusing on.

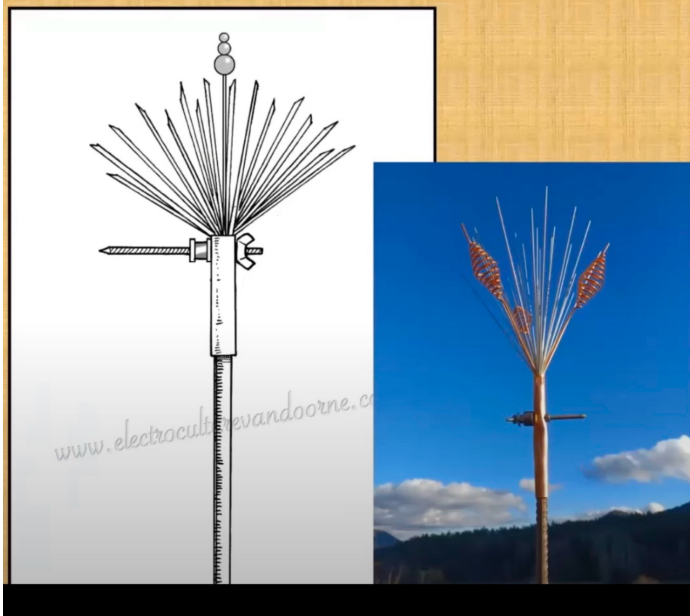

Passive Electroculture

To his credit, the vast majority of information in this section is from Yannick Van Doorne and his book on electroculture.

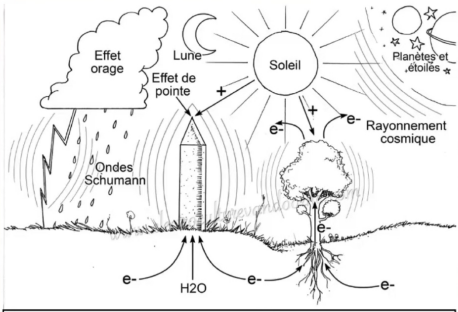

As I mentioned in HIP, Section 1, based on the beta test at my garden, I have chosen Atmospheric Antennas and Small Basalt Filled cone topped Cylinders to start with.

horizontal rod oriented south.

Home Made 6m Antenna

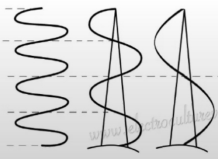

How it Works
Advanced effects

Electroosmosis

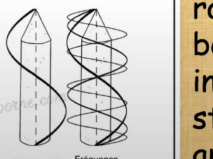

ELF radio antenna

Reception, amplification and radiation of beneficial energies in surroundings, stimulating fertility and vital energy

Une fréquence de base avec ses harmoniques

Longueur d'onde de base et longueurs d'ondes multiples

Fréquence de base

Fréquences de base avec ses harmoniques

The diagram on the left shows a plant with various energy inputs: 'Effet orage' (storm effect), 'Lune' (moon), 'Soleil' (sun), 'Planètes et étoiles' (planets and stars), 'Rayonnement cosmique' (cosmic radiation), 'Ondes Schumann' (Schumann waves), and 'H2O'. It also shows 'Effet de pointe' (point effect) and 'e-' (electrons) moving through the plant. The waveforms on the right illustrate the 'Fréquence de base' (base frequency) and 'Fréquences de base avec ses harmoniques' (base frequencies with harmonics).

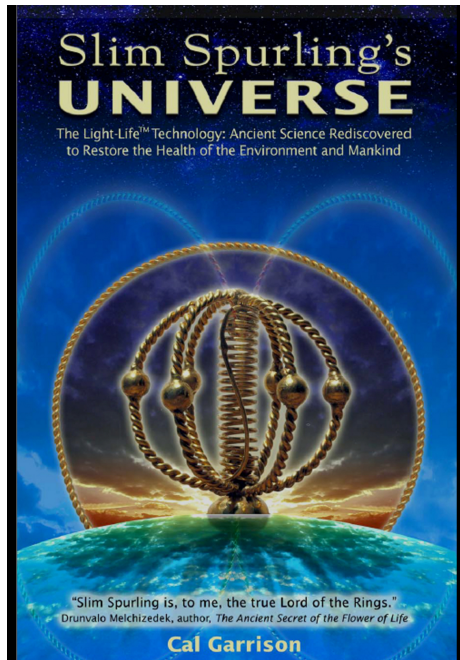

Home Made Basalt 52cm Tower

The Atmospheric Antennas conduct electrons from the soil to the atmosphere, provide magnetic orientation, and Ighina spirals capture cosmic and telluric energies.

The Basalt towers work as outlined in the image above. Importantly, they contain basalt, a paramagnetic rock with beneficial electroculture effects.

Light-Life Technology

“many chemical, agricultural, and biological advances are potentially available to anyone willing and able to make the effort.”

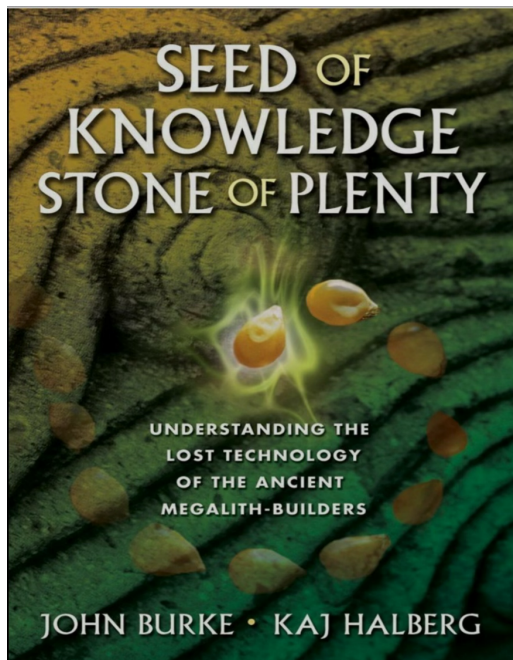

“In 2001 Pete Jackson and Phil Callahan wanted to do some scientific tests with Slim's rings.”

“Their findings verified that the rings and the coils have a very high para-magnetic value. Paramagnetism can be measured by expensive meters found in the best-equipped laboratories.”

“Pete and Phil rated the paramagnetism of the rings at 18,000! This is six times the greatest value of the highest naturally para-magnetic substances known.”

— Quotes from Slim Spurling's Universe: The Light-Life® Technology: Ancient Science Rediscovered to Restore the Health of the Environment and Mankind by Cal Garrison

Geomagnetism for Seeds & Crop Optimization

“The first high civilization of the Americas, the Olmec of Mexico, built earthen mounds and pyramids with well-engineered electrical characteristics. Villages with a mound enjoyed a better standard of living than otherwise identical villages nearby.

The last Pyramid of the Olmec was the first of the Maya, The Lost World Pyramid of Tikal, Guatemala. At this pyramid we measured tremendous surges of electrical ground current and airborne electric charge in the hours bracketing dawn. Local Mayan corn (maize) seed that we placed atop this pyramid during these electrical surges displayed tremendously increased germination and growth. The stronger the electrical activity on a given day, the greater the growth improvement. Seed was not improved when placed atop later pyramids, which are known to have been built as political monuments and which had no electrical activity. Mayans today still place their seed atop certain pyramids at dawn, and teach that plant growth is improved above the same kinds of geological structures that generate such electrical forces.”

“Modern seed treatments using artificial versions of these natural forces are known to produce similar kinds of growth improvements, including higher yields. This has been confirmed dozens of times by universities and agricultural organizations. The degree of improvement is highest with the kinds of stressful growing conditions and relatively poor seed quality that typified the agriculture of the megalith builders.

These kinds of energies are generated naturally everywhere every day by well-known forces of the Earth, but they are magnified at some locations by certain geological structures called conductivity discontinuities. Consistently, throughout history and all over the world, giant structures of earth and stone were built atop such conductivity discontinuities.

The Native American mound builders of North America were the cultural descendants of the Olmec and Maya. They located earthen mounds and pyramids atop magnetic anomalies and at conductivity discontinuities where unusually strong electrical ground currents are generated – all confirmed in direct measurements by us. Seed left atop mounds during powerful energy surges have shown dramatic improvement in growth. These mounds can be visited today across most of the South and Midwest.

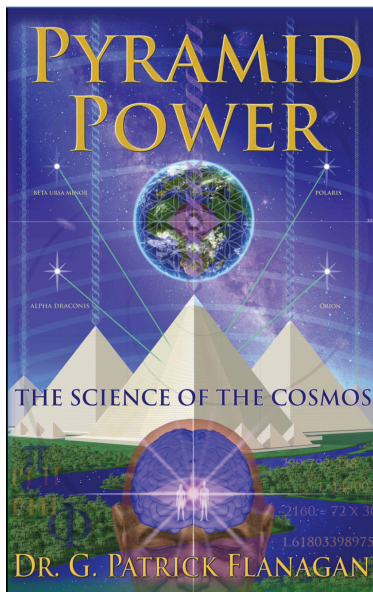

Rock chambers throughout the Northeastern United States were built atop magnetic anomalies at conductivity discontinuities just like the mounds. We spent years measuring electric charge separation inside these chambers and improved growth from maize, wheat, and bean seeds left inside during days with electric charge, as compared to control seeds left outside. Results met scientific standards for high statistical significance. The biochemical changes inside this seed have been found to be the same kinds of biochemical changes found inside seed treated with today's modern, laboratory version of these energies.

Nine samples of corn (maize) seed of a variety grown by Native Americans from 700 AD onward was placed inside three different rock chambers for varying amounts of time, then planted and grown out organically. When compared to nine plots of control corn kept outside the chamber or at home in the laboratory, the chamber-exposed seed produced on average double or triple the yields of the plots of control seed.

(chapter 10) began with the account of an early scientific pioneer of electricity experiencing powerful electric charge atop the great pyramid at Giza. And finally we saw how every aspect of the design of the giant pyramids, from the building materials for each part, to the fitting of the casement stones, to the 'airshafts' and chambers, might well have functioned to efficiently collect, concentrate, and harness these energies to ionize air and produce airborne nitrogen fertilizer to the farms downwind."

Burke, John; Halberg, Kaj. Seed of Knowledge, Stone of Plenty (pp. 270-274). Kindle Edition.

Use of Pyramids For Electricity, Life Force Energy, & Plant Growth

Page 42: "The earth is surrounded by a high voltage electric field."
"The earth's surface is negatively charged, the atmosphere is positively charged except in certain areas as in thunderstorms."

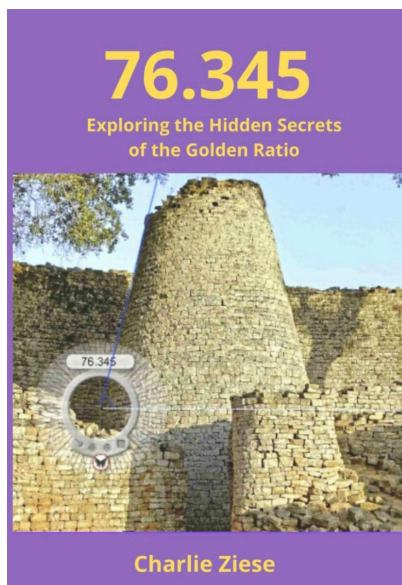

"There positive field produces a voltage gradient across the atmosphere. This gradient approaches 200 to 300 volts per meter near the surface of the earth."

Page 43: "Experiments have shown that this field is an important factor affecting life. It has been shown that plants deprived of this field do not grow properly."

"Our modern metal buildings tend to be Faraday cages and completely eliminate the effects of this natural field."

Page 45: "It has been shown by research that eliminating or reversal of this field can have negative effects on people, augmenting fatigue, irritability, and natural apathy."

"Recent tests have shown that an artificially produced field of this type as high as 10,000 volts per meter has the effect of eliminating fatigue, and improving brightness discrimination. These fields increase the rate of spontaneous electrical impulses generated by the nerves."

Page 1195: Boosting Life Force Energy(LFE) in the Presence of EMFs with Russian Pyramids

Goal: To determine the impact of a Russian Pyramid in maintaining or improving life force energy in the presence of EMFs.

Methodology: Using the Bovis Life Force Energy Scale, we dowsed for Life Force Energy ("LFE") both with and without the presence of EMF radiation in a variety of differing scenarios using the Pyramid, caduceus coil and sound healing. A cell phone playing a YouTube video was used as the source of EMF radiation. A "base case" LFE was established with no pyramid energy field or EMF radiation to establish a basis of comparison.

Results: In all cases, LFE measured in the presence of EMF radiation, was significantly higher inside the pyramid.

Page 1201: Plant Growth Supercharged by Russian PVC Pyramid

Goal: To replicate the Russian Pyramid research experiments on plant growth.

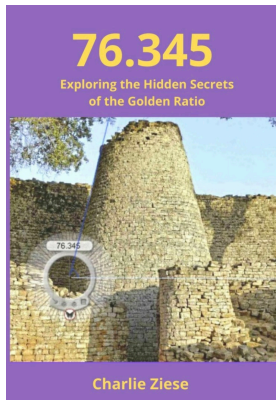

Methodology: A variety of different greens were planted in identical raised planters with identical soil and sunlight. In one of the planters, we installed a 10' high Russian Geometry Pyramid inside one and used the other planter as a control.

Results: Results were consistent with Russian results, with the pyramid plants growing 200-400% larger than the control.

Free Electricity

Anyone who has seen lightning has seen proof that there is electric energy transfer between the atmosphere and the earth. All we have to do is capture that free energy.

Ziese, Charlie. **76.345: EXPLORING THE HIDDEN SECRETS OF THE GOLDEN RATIO** Kindle Edition.

Page 1008: RUSSIAN PYRAMID RESULTS ON FREE ENERGY GENERATION (by Dr. Golod and his team)

“Methodology: Radar equipment was placed at distances of 30, 32 and 60 kilometers (19, 20 and 38 miles) from a 22-meter (68 feet) Russian 76.345 Pyramid. Results: Radar readings indicated the presence of an ionized energy field 2000 meters (6,200 feet) high and 500 meters (1,550 feet) wide along the vertical axis of the pyramid.

Results: Radar readings indicated the presence of an ionized energy field 2000 meters (6,200 feet) high and 500 meters (1,550 feet) wide along the vertical axis of the pyramid.

Further studies confirmed that a larger circle of this ionized energy surrounded the area above the pyramid in a 300-kilometer (185 mile) range”

“Electrical energy from the pyramid could be harnessed by a capacitor that was placed at the apex of the pyramid; the capacitor would spontaneously take on a charge.”

Outline of planned electricity harvesting setup:

Place a capacitor at the apex of a 76.345 Russia pyramid frame. Connect the capacitor via appropriate voltage controller to one or more Simpliphi PHI 3.8 kWh LFP Battery. This will provide perpetual AC electric current for the home or community center. Work to determine the exact set up will be initiated.

This harvesting of free electricity will not “challenge” existing “interests” and has essentially no potential for destructive use. Since there will be very few units, each unit is small, and off grid; displacement of existing capacity, jobs, and technology will be negligible and virtually invisible.

Converting to a Phryll energy generator inside the pyramid frame is the elegant future solution which can be easily installed into existing homes and community centers when small scale Phryll generators become available.
